(1) Estimate; (2) Projection

\*In addition to the state personal income data published by BEA, the payroll data compiled by the state Employment Security Department are used in the Preliminary estimates of 2010 median household income.

Money income, as defined by the Bureau of the Census, includes wage or salary income, self-employment income, interest, dividend, rental income, social security or other public assistance income, retirement, and disability income; etc. It excludes some components of personal income defined by the BEA. For example, employer-paid pension and medical benefits are included in personal income but not in money income. The median measures the point at which half of all households have more income and half have less.
